ABSTRACTED-PUB-NO: RD 431127A

BASIC-ABSTRACT: NOVELTY - An infrared transceiver system provides communications with hand-held devices (HHD) throughout a store and the system provides information when a customer queries a product name or brand by entering it into the HHD. The user can create a shopping list in the HHD and query the system to provide an efficient map for gathering of products on the list. A laser scanner in the HHD can scan any coupons and can obtain information from a product by scanning its bar-code and transferring information to the system, returning product information to the HHD. 'On the spot' coupons could also be offered to influence a purchase.

USE - Using a HHD for shopping.
